NANOQUA

Nano Product

This nanoscale combination has a balanced mix of minerals specifically formulated for dynamic growth of indigenous diatoms. These ochrophytes are unicellular organisms existing as solitary cells or in colonies made of silicon and oxygen.

These diatoms photosynthesise earlier in the day and consume nitrogen and phosphorus out-competing all algae.

Application

Application rate: 1 litre per 7 million litres of water.

Ideally a morning application, utilising a mix of target water and product in a knapsack or powered sprayer, apply to lake perimeter reaching where possible.

Benefits

- Algae elimination
- Improved water clarity
- Reduction of foul odour
- Improved health and diversity
- Increased dissolved oxygen
- Reduction of silt
- Decrease in fecal coliform
- Balancing of pH
- Avoidance of nuisance organisms through competitive elimination
