# **NANOBULLET**

## **Nano Product**

Bolstered nano-silicon providing excessive protection from disease and a manageable green-up any time of the year (no NPK present).

## **Application**

Application rate: 2 litres per hectare. Suggested water volume: 300-400 litres per hectare. Do not irrigate in.

Apply as a fine spray, ideally morning on bright days. Reapply in case of precipitation.

## **Benefits**

- Minimises dollar spot, anthracnose and fusarium
- Harden turf before seasonal disorders
- Colour response with no nutritional growth
- Aid wear tolerance in high traffic areas
- Increase in rigidity
- Can be used with all fungicides
- No environmental damage through run-off
