NANOCHARGE

Nano Product

A revolutionary way to deliver NPK and other micronutrients to plants. NanoCharge utilises breakthrough nanotechnology to deliver Nitrogen, Phosphorus, Potassium and other essential nutrients in a single formulation.

Nanoparticles are proven to outperform micronutrient particles due to their larger surface area, easy attachment, fast mass transfer and controlled release of active ingredients.

Application

Application rate: 1 litre per hectare. Suggested water volume: 400 litres per hectare.

Apply as a fine spray in the early hours of the morning. Reapply in case of precipitation within 2 hours of previous application.

Benefits

- Green speed increase by approx 20% - same HOC
- No denitrification
- No leaching
- NPK exactly where you need it
- Only 0.006 kg/ha of N
- Immediate and lasting colour response
- Boost photosynthesis, plant & root health
- Promote turgidity, cleaner cut and a true roll
- Enhance fertilizer, fungicide and PGR response
- Lower disease pressure
- Mitigate lower irrigation water quality
- Improve tolerance against chemical and mechanical stress
