NANODETER

Nano Product

Introducing our new nano deterrent product specifically designed to tackle the problem of grub and insect activity on sportsturf. This innovative solution combines the power of nanotechnology with natural ingredients to provide a safe and effective way to move pest populations without harming the environment or the turf. Our nanonutrient formulation provides targeted control of grubs and other soil-dwelling pests, while also promoting healthier turf growth and improving soil quality.

Say goodbye to chemical pesticides and hello to a more sustainable and effective approach to pest management which simply creates an inhospitable environment from these pests. A *No Kill* product!

Using nanonutrients containing silica is a more efficient approach to pest management, as they are typically derived from renewable resources and have a lower impact on the environment than chemical pesticides.

Benefits

- Deter, not kill
- Deterrent for grub and pest activity
- Minimise worm castings
- Improve playing conditions
- Targeted delivery with mass coverage
- Two pronged attack; pest and plant
- No pesticide used
- Move populations to selected, safe untreated zones
- Less active ingredients used
- No harm to the environment

Application

Application rate: 3 litres per hectare. Suggested water volume: 300-400 litres per hectare. 2x applications in spring and 2x applications in autumn. Ideally, product to the pest location.

Successive applications create more difficulties for the pests to thrive and breed.
