NANOVIGOUR

Nano Product

Proven to deliver exceptional plant health through the action of nano silicon and absorbed essential nutrients.

When applied to golf and sports turf, NanoVigour promotes cell wall strength, plant rigidity, root development, water efficiency and colour response that does not look manufactured.

Under biotic and abiotic stresses NanoVigour presents a barrier against environmental stresses and limits the susceptibility to pathogens.

Application

Application rate: 1 litre per hectare. Suggested water volume: 400 litres per hectare. Do not irrigate in.

Apply as a fine spray, morning application ideally, a bright day. Reapply in case of precipitation within 2 hours of previous application.

Benefits

- Increase green speed by approx 20% - same HOC
- No environmental damage through run-off
- Improve fertiliser, fungicide and PGR response
- Colour response without surge growth
- Resistance against fungus and pests
- Increase wear tolerance in high traffic areas
- Overall plant health with greater rigidity and photosynthesis
- Defence against heat, salinity, radiation, drought, flooding and heavy metal stress
- Nano particles allow for easier dispersal and integrated suspension in the tank
